How does K-Brain work?

Our **AI tool** automates the primary operational phases of cash reconciliation, effectively addressing the identified issues.

Automated procedures

1 Identifies the customer from the bank transfer description

2 Matches the customer code in SAP, using past data if available

3 Extracts open items linked to the payment

4 Proposes the posting for user validation

Our AI engine

No more rigid rules: **AI learns and evolves over time**

Artificial Intelligence

Automatically identifies and extracts pertinent information from incoming transfers

ERP integration

Direct interaction with the ERP management system to reconcile collections with customer invoices

Machine learning

Continuous learning and improvement of reconciliation performance, guided by the history of previously documented transfers

No matter your ERP, K-Brain fits in !
